LONDON, UK

PERSONAL STATEMENT

Engineer with a mechanical engineering (MEng) background and experience across software development, systems integration, and engineering analysis. Experienced in building automation and integration solutions using Python, APIs, and data-driven workflows alongside exposure to production system environments and distributed systems troubleshooting. Comfortable operating across software and engineering domains to design, analyse, and improve complex systems, with strong foundations in simulation, modelling, and data analysis. Seeking to contribute to engineering teams developing robust software and systems solutions in complex technical environments.

EDUCATION

September 2020 – July 2024	University of Warwick – Mechanical Engineering Integrated Masters MEng Achieved Grade: First Class Honours
September 2018 – August 2020	St. Dominic's Sixth Form College – A-Level Mathematics (A*), Further Mathematics (A*) (Highest marks in cohort), Physics (A)
September 2013 – July 2018	Hatch End High School – GCSE Mathematics (9, Highest mark in cohort), Chemistry (9), Physics (9), Computer Science (8), Geography (8), Biology (8), English Literature (7), Religious Studies (7), English Language (6), Music (5), German (5)

CAREER HISTORY

May 2025 – Present	Content Guru – Software Support Engineer (with DevOps and Operations Rotations) Built and configured scalable contact centre solutions handling tens of thousands of daily interactions integrating REST APIs, CRM systems, and automation workflows to improve system efficiency and customer experience, contributing to a 30% increase in satisfaction metrics. Worked across infrastructure and platform layers during DevOps rotations, contributing to deployments and system improvements using Kubernetes, Rancher, Ansible, NGINX, and GitLab CI/CD within Linux environments. Performed root cause analysis on production systems, debugging complex multi-system issues and implementing long-term improvements to reliability and performance. Developed and modified Bash and Python scripts to support automation and operational efficiency. Gained hands-on experience in data centre environments, supporting server networking, cabling, and low-level infrastructure debugging in high-availability systems.
August 2021 – January 2025	BUPA Cromwell Hospital – Medical Records Bank Staff Distributed and managed patients' medical records, sorting and archiving over 32,000 records monthly utilizing SQL to filter data based on appointment dates. This relieved storage constraints by 40% and simplified access for colleagues. Working in a team of two, I strategized efficient workload management for haste, enhancing my data quality, automation, problem-solving and teamworking skills.
July 2023 – September 2023	Rolls-Royce Submarines Manufacturing P&I – Summer Intern Developed a manufacturing management dashboard in Power BI, reducing briefing and management times by 60%. Meeting with project stakeholders to understand how their data is logged in the manufacturing production line enabled me to extract, transform, load (ETL) the data whilst employing data cleansing operations. This led me to develop a

dynamic dashboard featuring real-time machine status mapping, vital manufacturing metrics, and data drilldown functionality. The experience taught me to lead meetings, big data management, and to collaborate across functions to meet business objectives.

July 2017

BUPA Cromwell Hospital – Medical Physics Assistant (Work Experience)

Led a data analysis project focused on patient treatments and the top ten affected body parts, using Visual Basic macros (VBA) to remove duplicates and manipulate data for visualization. This project enhanced my adaptability by applying coding skills across different languages and scenarios. I conducted quality analysis on tomography machines to calibrate x-ray precision, developing a strong sense of responsibility for patient safety.

ADDITIONAL EXPERIENCE AND ACHIEVEMENTS

- **Professional Engineering Development** – Working towards CEng qualification at IET.
- **Bright Network Couch to Coder Certificate** – Engaged in a 5-week web development program, attending webinars on cutting-edge technologies including large language models (LLMs) presented by Amazon and HSBC. I developed skills in VS Studio, HTML, CSS, JavaScript and GitHub. Following the program, I developed my own website (found at: <https://sourceshiv.github.io/>).
- **Bright Network Internship Experience UK Certificate** – Attended and engaged in a range of specialist led talks from a variety of large companies including Rolls-Royce, PA Consulting, Vodafone, and Citrix. These talks covered and helped me to develop a collection of skills such as problem solving, self-reflection, collaboration, negotiation, and organisation.
- **Largest Chess Tournament in the World** – Practising strategy and time management cultivated my ability to think steps ahead whilst making quick logical decisions under time pressure.
- **Princess Diana Award** – Achieved from an anti-bullying campaign. Became comfortable in giving advice and seeing situations from someone else's perspective enabling me to communicate conscientiously, as I showed empathy towards the individuals being bullied.

TRANSFERABLE SKILLS

- **Programming & Automation** – Python (including API integration and script modification), SQL, Bash, JavaScript, MATLAB. Experience developing automation scripts and working with REST APIs using Postman and Swagger. Currently expanding knowledge of C#, TypeScript, and React.
- **Infrastructure & DevOps** – Kubernetes, Rancher, Ansible, NGINX, IIS, AWS (exposure), GitLab CI/CD. Experience supporting deployment pipelines, configuration management, and Linux-based environments using tools such as PuTTY.
- **Monitoring & Systems Tools** – Grafana, Splunk, ScienceLogic, Netbox, Panorama, OCOM. Experience in troubleshooting distributed systems and supporting production environments.
- **Data & Engineering Tools** – SQL, Power BI, DAX, M Code, ETL workflows. Strong analytical background from engineering and manufacturing data environments.
- **Engineering Design & Simulation** – Fusion 360 (CAD), Abaqus (FEA), Star-CCM+ (CFD), MASTA, MATLAB, Simulink. Experience in mechanical design, simulation, and system-level modelling and validation.

INTERESTS, AND HOBBIES

- **3D printing and DIY prototyping** – Designing and fabricating replacement parts and functional prototypes.
- **Climbing/bouldering, gym training, and mixed martial arts** – Discipline, resilience, and physical conditioning.
- **Travelling** – Experiencing new cultures and situational engineering.
- **Trading (stocks, commodities, crypto)** – Strategy development, backtesting in Excel, and market analysis using TradingView.
- **Languages** – English and Gujarati (bilingual communication)
- **Guitar** – Sustained practice, coordination, and iterative skill development
